This package contains four essential plugins: FumeFX, AfterBurn, DreamScape, and Power Translators. Remove 3D Animation Smoke and Fume includes plugins for 3ds Max 2009, and for 3ds Max 2008 with a serial number. These plugins offer unmatched realism and practicality for realistic smoke and fume simulation. Each plugin includes a source library containing multiple presets, complete with complete interface setups, patterns, and presets, and even an example project with source files. Additional Information: GIB Support: I also sell individual plugins that contain the complete source library with all the templates and presets, including the source files for those templates and presets: FumeFX is the same quality smoke/fume plugin with great support, but a lower price. The source library contains more presets, and some are exclusive to FumeFX (for example, smoke over water for great looks). AfterBurn is a simple, but powerful real-time smoke/fume effect for 3ds Max 2008 32bit, but can be used with other versions of 3ds Max. The source library contains more presets and interface setups.
